

What the budget and the books can be connected to, and what is still missing

Following a dollar from what was budgeted to what was spent works at two levels and stops at the third. Most of what stops it is a report that has not been asked for. And there is one question we cannot settle from outside your system, which we have put to you as a question rather than a finding.

Where the dots connect today

The school department, overall

Budget against spend, whole department. This is what the review document you have is built on, and the two documents reconcile.

both sides • every year held • reconciles to \$1.93

By category code

2710 Guidance, 2305 Teachers. The district prints the code over each group and the ledger carries it in the account number, so the two can be compared category by category.

41 of 45 codes • FY2026 period 12 only

Where they stop

Below the category, at a single line

MUNIS shortens account names to ten characters, so MS GUIDANC and HS GUIDANC are both coded 2710 where the budget has a separate row for each school. Nothing in either document tells them apart.

no key from either direction

Individual transactions

We hold Account Details for the athletics revolving fund and nothing else — and even those carry no object code, so a payment cannot be attributed to a category.

fund 1301 only · 277 rows · no object code

The revolving and grant funds

We have their balances, but they are absent from the expenditure ledger, so they can sit beside the school budget and never inside it.

61 funds held · none appear in the ledger we have

State funding, at any level

Chapter 70 arrives unrestricted into the general fund. No revenue account carries a category, and no report ties aid to a particular expense.

0 of 222 revenue accounts carry a code

The asks

Four reports, in the configuration we understand them to take. Three are Tier 3 in the framing from the earlier note; the fourth is for the district rather than the Town.

1 Account Details, all school-related accounts

Account Details · all school funds, not only 300 and 301 · **with the object code**

This is the single most useful one. It opens transactions at both the department and category levels, and MUNIS already runs it — it produced the athletics files.

Worth naming the object code explicitly: the June request asked for account-level detail and what arrived was one account, CASH, with no object code on any row.

2 Expenditure detail for the school's own funds

Account type EXPENSE · Print Totals only FALSE · the grant, revolving and school choice funds

The copy we hold covers the general and enterprise funds. Running the same report for the school's funds would put them into the ledger rather than beside it.

3 Revenue report

Account type REVENUE · Print Totals only FALSE

For state and grant money coming in. This tells us how much arrived, which is worth having on its own — see the last section for what it cannot do.

4 A crosswalk, from the district

which MUNIS account each school budget line is built from

The one ask directed at the district rather than the Town, and the only thing that would open the line-item level at all. The budget is built in a workbook; whoever builds it may already know which accounts each line draws on.

The full list, FY2023 to FY2026

Everything outstanding, by year, routed to whoever produces it. **36 of these are reports from the Town Accountant** and are the substance of this request; the rest are noted so the picture is complete, not because they are being asked of you.

From the Town Accountant — summary by year

Each row is one report run once per year. The configuration is as we understand it; corrections welcome.

REPORT	FY23	FY24	FY25	FY26	NEED
Appropriation as voted arrives with any report below — the ORIGINAL APPROP column	.	.	.	✓	3

REPORT	FY23	FY24	FY25	FY26	NEED
Q1 spend report (period 3) glytdbud · Fund 0100 · Account type EXPENSE · Year/Period YYYY/3 · Print totals only N · Suppress zero bal accts N	.	.	.	.	4
Q2 spend report (period 6) the same at Year/Period YYYY/6	.	.	.	.	4
Q3 spend report (period 9) the same at Year/Period YYYY/9	.	.	.	~	4
Year-end position (period 12) the same at Year/Period YYYY/12	.	.	.	✓	3
Year-end close (period 13)	.	.	.	.	4
Account Details, transaction level Account Details · all school-related accounts · WITH the object code	.	~	~	~	4
Purchase orders closed after close purchase orders closed against the year after its initial close, with amounts and dates – not a standard report	.	.	.	.	4
Revenue ledger glytdbud · Account type REVENUE · Print totals only N	.	.	.	✓	3
Revolving and grant fund activity glytdbud · the school grant, revolving and school choice funds · Account type EXPENSE · Print totals only N	.	.	.	✓	3

Year-end close, period 13, is the one we would take first if only one were possible.

Without it no year's surplus can be computed from the outside at all. Period 12 is the position before the books close; period 13 is the year as it finally stood.

Itemised – 33 documents from the Town Accountant

Each numbered line is one file. Grouped by report so the same settings can be reused and only the period changes. **Spreadsheet for each, and the printed copy alongside if it is no trouble.**

Year-to-date budget report

- 31 fiscal year 2024
- 32 fiscal year 2025
- 33 fiscal year 2026

From the district — 10 documents, plus one thing that is not a report

REPORT	FY23	FY24	FY25	FY26	NEED
Proposed budget, line level	✓	~	~	~	3
Approved budget, line level	~	.	.	✓	3
Prior-year actuals, restated	✓	~	✓	.	2
Grant awards listed	✓	✓	.	.	2

And the crosswalk described earlier: which MUNIS account each school budget line is built from. That is the only thing on either list that would let a single budget line be followed into the ledger.

We will fetch these ourselves — 1

REPORT	FY23	FY24	FY25	FY26	NEED
DESE all-funds per pupil, by function	✓	✓	✓	.	1

DESE publishes these. Listed only so that the completeness picture is not mistaken for a request.

If it is easier, the order that helps most: period 13 for each year, then Account Details with the object code, then the revenue and fund reports, then the earlier quarters. The first two open more than the rest combined.

And one sample first, if that suits — a single year or a single month — so a wrong field list costs a day rather than the whole exchange.

On format: the spreadsheet is the ask, and both is better

The XLSX export is what we need. The sheet gives the full coded account —

0100-3-300-**2710**-04-4-65-1-511024

— and the PDF gives a label with the code removed. That fourth segment is the *only* thing joining the district's budget to the Town's books, which is why the category comparison above works for FY2026 period 12 and no other period: that is the one report that arrived as a spreadsheet.

But the PDF alongside it is genuinely useful, so both is ideal. The printed report carries its own options page — account type, print totals only, the fund and period selected, whether revenue prints as a credit — and the spreadsheet does not. That header is how we know how a report was run, which matters as much to us as the numbers: a column of figures whose parameters we are guessing at is a column we have to hedge every time we quote it.

So: **XLSX for the data, PDF for the criteria.** If only one is possible, the spreadsheet.

Sending earlier years the same way would extend the category comparison backwards with no new report having to exist.

If any of this is not possible as described

Tell us which part, and that is more useful than the data. Everything above is our reading of what MUNIS can produce, assembled from the reports you have already sent. We are certainly wrong somewhere, and the shape of the mistake matters:

- **A parameter we have named wrongly** — then the right name saves a round trip.
- **A report that does not exist in that form** — then we would rather ask for what does.
- **A field that exists on the record but is not on the report as configured** — this is the one we would most like to hear about. The object code is the example: it is on the account, and the Account Details we received did not show it. If there are other fields sitting one checkbox away, we do not know what they are.

If it is easier to send one month, or one department, as a sample before running anything at scale, that suits us better too. A wrong field list found on one month costs a day; found on five years it costs the whole exchange.

A question we cannot answer from the outside

Is there any way to see what state aid actually paid for?

Here is what we found, and we would rather be corrected than act on it. No revenue account in anything we hold carries a category code — 0 of 222 — and the state aid accounts share no organisation code with any expense account. Reading that, we concluded that Chapter 70 arrives unrestricted into the general fund and is thereafter indistinguishable from any other revenue, so nothing records which dollar paid which bill.

If that is right, it is worth us knowing, because it is the one question on this page we would otherwise keep asking for. We would stop, and say instead what can be said: how much aid came in, what the department spent, and what the town had to raise after aid.

If it is wrong — if there is a report, a fund structure, a grant schedule or a reporting requirement that ties aid to spending, even at a category level — that would be the most valuable thing in this whole exchange, and we would not have known to ask for it.

The same question applies, more narrowly, to the grants: is there anything that records which accounts a Title grant or circuit breaker reimbursement paid into?

Every figure here was produced by querying the documents the Town and the district have published or sent, on 3 September 2026. Where this document says a report could be produced, that is our understanding of what MUNIS can do rather than a claim about your system.
