

Request email — draft, not sent

Generated 2026-09-04 from `notes/outbound/drafts/REQUEST-EMAIL-DRAFT.md`. Every figure is recomputed from `sources/data/lunenburg.db` by `no verifier` — treat every figure as unchecked. A printed page outlives the numbers on it: re-run that script before quoting anything here.

Held back deliberately: the quarterly reports (periods 3, 6, 9 and 12) are NOT in this request. They exist only to show when in a year a variance appeared, and Account Details gives that at day resolution — so they are needed only if item 2 turns out to be impossible. Including them as a fallback made the request 65% larger for something probably unnecessary, and worse, offered an easy alternative to the hardest and most valuable item on the list. If item 2 cannot be produced, ask for them then, as their own short request.

Accompanies `CONNECTING-THE-BUDGET.pdf`. Drafted 3 September 2026.

Each numbered item is a report **configuration**, not a file count. The years say how many times it would need running if it has to be run one at a time — which is exactly the assumption I would like to be wrong about.

Subject: Records request — school department reports, FY2023 to FY2026

Hello again,

Attached is a short report on what can and cannot be followed from the school budget into the Town's books, and why. This message is the request that follows from it.

Five report configurations, covering FY2023 to FY2026 — twenty-three runs in all. The first three matter far more than the rest.

I am not asking for a particular number of files. The years listed under each item are how many runs it would take one at a time, and if any of it comes out in a single export — all funds together, all years together, or several reports at once — that is better for both of us and I have no attachment to the shape. Likewise, **each item says what I am looking for as well as how I think the report is run**: the configurations are my reading of MUNIS from what you have already sent, so if a different report gives the same information, or gives it more easily, I would much rather have that.

Please send the spreadsheet export, and the printed copy alongside where that is no trouble. The sheet carries the full account code, which is the only thing joining your ledger to the district's budget; the printout carries the options page showing how the report was run, which the sheet does not. If only one is possible, the spreadsheet.

A. THE THREE THAT MATTER MOST

1. MUNIS Year-to-Date Budget Report (glytdbud) — expenditures, at the year-end close

Account type EXPENSE · Print totals only N · Suppress zero bal accts N Year/Period YYYY/**13** Funds: 0100 for school departments 300 and 301, **and** the school's own funds listed below — one run if they can be selected together, otherwise however it comes *Looking for*: the final position of every school account

once the books were closed — appropriated, moved, spent, and what was left. I can see the year before it closes and not after. → **FY2023, FY2024, FY2025, FY2026**

1. Account Details — the most important item on this list

****Please send the export as it comes, with all of its columns.**** I would rather have columns I do not need than find out later that one was left out. The only field I would specifically check for is the ****object code**** — the files sent in June had none, and without it a payment cannot be attributed to a category.

****One narrow exception, on the special education accounts only.**** There the vendor is sometimes a parent being reimbursed rather than a company, and I do not want that. For those accounts a ****vendor number in place of the name**** is ideal — it tells me how many distinct payees there are and whether one recurs across years, and names nobody. If it helps, send the numbers now and, separately and only if you are comfortable, a list of numbers to names for the institutional vendors — the collaboratives, the transport companies, the out-of-district schools. I can work from numbers alone in the meantime. ****Everywhere else the vendor name is fine and useful**** and I am not asking for anything to be removed.

****The scope, in three parts:****

(a) The general fund school accounts — every account in fund 0100 under departments 300 and 301. That was 261 accounts in FY2026.

(b) The school's own funds — all sixty-one below, and anything else with activity in the year being run. Several are named for FY2023 to FY2025 and show no FY2026 activity, which means they were spent in the years I am asking about; Title I is among them. A fund closed before FY2026 would not appear in the report I am reading from at all.

(c) The revenue accounts – these ten, and anything else bearing on the schools.
 No revenue account in what I hold sits in a school department, so I may be looking in the wrong place; if school revenue is recorded elsewhere, that is worth knowing on its own. I am reading ten-character names here, not a chart of accounts.

ACCOUNT	NAME	FY26 RECEIVED
0100-01001-450600	CH 70 AID	6,870,136
0100-01001-451400	UGGA	987,327
0100-01001-450500	ABATE ELDE	141,305
0100-01001-452600	MEALS TAX	111,841
0100-01001-431900	PS TUITION	75,279
0100-01001-473000	SPED REIMB	61,499
0100-01001-452000	S6CH115VET	35,184
0100-01001-450100	STATE LAND	32,400
0100-01001-451100	CHARTER	19,602
0100-01001-451800	RM OCC EXC	530

Looking for: every transaction against those accounts, so that a line growing because a price rose can be told from a line growing because more was bought. On the revenue side: how aid arrived and when, and whether any transaction carries a reference tying it to anything.

On the shape of it. The files you sent in June were one account each, and 261 accounts across four years would be a great many files. If this can be run across a range of accounts, or if a different report gives transactions across accounts, I would much rather have that. **If it can only be done one account at a time**, these thirteen are where FY2026 moved most and would be the place to start:

ACCOUNT	NAME	FY26 BUDGET	SPENT	VARIANCE
0100-S0511062-535019	SPED PRIVA	988,630	466,001	+522,629

0100-S2512061-511001	PS SPED TE	635,488	574,905	+60,583

→ **FY2023, FY2024, FY2025, FY2026**
FY2024-FY2026: I hold the athletics fund for those years – this is the same report for everything else.

1. **A report on line-item transfers** from-account, to-account, amount, date, and the authority for each — c.44 §33B or the town meeting article. I do not know what this report is called, or whether it is one report or several. *Looking for:* for each budget change, what it moved from, what it moved to, how much, when, and under what authority. The ledger shows that an account's budget changed and never what it changed from. → **FY2023, FY2024, FY2025, FY2026**

B. DIFFERENT INFORMATION — NOTHING ABOVE COVERS THESE

1. **MUNIS Year-to-Date Budget Report (glytdbud) — revenue** Account type REVENUE · Print totals only N · Year/Period YYYY/13 The same revenue accounts listed in item 2, and anything else bearing on the schools. *Looking for:* what came in and from where, against each revenue account — the annual totals rather than the transactions, which is what item 2 asks for. → **FY2023, FY2024, FY2025** — and FY2026 too if it is easier than skipping it; I have that one already but no harm in it arriving twice.
1. **Purchase orders closed after the year closed** I do not know whether this is a standard report. Amounts and dates. *Looking for:* spending that lands against a year after its initial close, so a year's final cost can be reconciled rather than estimated. → **FY2023, FY2024, FY2025, FY2026**

On three of the funds in item 2

2640 is the circuit breaker reimbursement, which offsets exactly the placement lines that moved most in FY26. 2813 and 2814 spent \$229,398 and \$179,637 on what I believe is the federal special education grant — staff paid from grant money, appearing in no budget line — in years when every paraprofessional account in the district ran over budget. Those may be unrelated; from outside I cannot tell.

One question, if it is quick

Is there any way to see what state aid actually paid for? Here is what I can see and what I have inferred from it, which are not the same thing.

What I can see: 0100-01001-450600 CH 70 AID received \$6,870,136 in FY2026. It sits under the 0100 GENERAL FUND header of your revenue report, no revenue account I hold carries a category code, the state aid accounts share no organisation code with any expense account, and there is no separate Chapter 70 fund anywhere in what I have — unlike the district's grants, which each have their own fund and can therefore be followed.

What I have inferred: that Chapter 70 lands in the general fund unrestricted and is thereafter indistinguishable from property tax, so nothing records which dollar paid which bill. **I want to be careful that this is a reading of a report header rather than of the account itself** — the printed report does not show the full account string, so the fund is where the row sits on the page rather than something the row states. A spreadsheet export would settle it on its own, and so would one sentence from you.

I have included the revenue accounts in item 2 so I can look at the transaction detail rather than keep assuming, since a reference or journal number on a receipt might tie to something I cannot see from the annual totals. **If you already know the answer is that no such link exists, saying so saves us both the exercise** — I would take that as a finding rather than a refusal, and stop asking.

Separately, I am asking the Superintendent for the district's **DESE End of Year Financial Report** submissions, which report spending by fund. Those should settle the neighbouring question — whether a grant or the town paid for a given cost — even if they cannot settle the Chapter 70 one, since Chapter 70 sits inside the general fund rather than beside it. Nothing in this request duplicates that.

If any of this cannot be run as described

Telling me which part is more useful than the data, and there are three shapes it could take: a parameter I have named wrongly, a report that does not exist in that form, or **a field that is on the record but not on the report as configured**. The last is the one I would most like to hear about — the object code is the example, since it is on the account and the files sent in June did not show it. If other fields sit one checkbox away, I do not know what they are.

And if a sample first is easier — one year, or one report — that suits me better too. A wrong field list found on one year costs a day; found on four it costs the exchange. If it is less work to send a year complete than to work out which parts I already hold, please just send it complete.

Appendix — the full list of report runs

23 runs. One row per report, fiscal year and period, which is the grain your own reports come in: **nothing you have sent me covers more than one fiscal year or more than one period**, and the three Account Details files you sent in June arrived as one file per year.

Fund is not a multiplier. Your FY2026 sewer report covers funds 5000, 5100 and 6000 at account level in a single document, so a run can clearly span funds. I have split the general fund from the school's own funds — rows 1a and 1b — only because every report you have sent keeps them apart. **If they can be selected together, that is one run and not two**, and the same is true of anything else here that turns out to combine.

The same table is attached as `REQUEST-CHECKLIST.csv`, with a `why_one_run` column giving my reason for each row and an empty `sent` column, so you can see where I have guessed at your system and correct it.

Every row is the spreadsheet export, with the printed copy alongside where that is no trouble.

3.26	Report on line-item transfers	FY2026	full year	—	fund 0100, depts 300 and 301 and the 61 school funds	
4.23	glytdbud — revenue	FY2023	13	REVENUE	the 10 revenue accounts	
4.24	glytdbud — revenue	FY2024	13	REVENUE	the 10 revenue accounts	

4.25	glytdbud — revenue	FY2025	13	REVENUE	the 10 revenue accounts
5.23	Purchase orders closed after year close	FY2023	full year	—	fund 0100, depts 300 and 301 and the 61 school funds
5.24	Purchase orders closed after year close	FY2024	full year	—	fund 0100, depts 300 and 301 and the 61 school funds
5.25	Purchase orders closed after year close	FY2025	full year	—	fund 0100, depts 300 and 301 and the 61 school funds
5.26	Purchase orders closed after year close	FY2026	full year	—	fund 0100, depts 300 and 301 and the 61 school funds

The two rows I am least sure about. Row 2, Account Details, because the June files were one account each and I do not know whether it can span accounts — if it cannot, the thirteen accounts listed in item 2 are where to start. And row 3, the transfer report, because I do not know what it is called or whether it is one report or several.

Thank you again,

Tj
