LUNENBURG BUDGET PROJECT

# What we hold from Lunenburg's annual town reports

Generated 2026-11-07 from **notes/generated/ANNUAL-REPORT-DATA-INVENTORY.md** by **scripts/build_annual_report_inventory.py**, which derives every figure from the sources it names. A printed page outlives the numbers on it: re-run that script before quoting anything here.

---

Generated: 2026-11-07 by `scripts/build_annual_report_inventory.py`, from the database and the archive as they stood that day. Every count below is computed, not typed.

| | |
|---|---|
| Annual reports held, 1959 to FY2025 | 68 documents |
| Pages of text read from them | 8,997 pages |
| Pages in the word search | 8,686 pages |
| Tables built from them | 111 tables |
| Rows in those tables | 157,481 rows |
| Of which: year-by-year series | 44 tables, 55,924 rows |
| Finding aids about the reports themselves | 9 tables |

Rows carry the edition and the page they were printed on, so a number can be checked against its page (except `report_new_growth_history`, which summarises across editions). The year-by-year series also quote the printed line.

---

## What you can do with it

- **Search the pages by word.** Any phrase, across 8,686 pages of all 68 editions, at `https://lunenburgbudgetproject.org/search`. Each hit links to that page of the original PDF.
- **Ask a question in SQL.** Every table below is in a public database. One web address runs a read-only query, for example `https://lunenburgbudgetproject.org/api/query?sql=SELECT edition, measure, value FROM series_fire_calls LIMIT 20`.
- **Follow a figure back to its page.** Rows carry `edition` and `page`; the original scanned report is at `https://lunenburgbudgetproject.org/docs/town-annual-reports/docs/<file>.pdf#page=N`.
- **Download it.** Every table is a CSV in the public repository (`https://github.com/tjloughlin16/lunenburgbudgetapp`), named in the tables below.
- **Compare across 60+ years.** The year-by-year series put the same measure from every edition in one table: fire calls, burials, enrolment, pay schedules, trust funds, permits.

## How it is stored

1. **The original reports**: 68 PDFs (867 MB), kept unchanged in a locked archive, each with its sha256 and the town's own address for it.
2. **The page text**: read from every page (by Amazon Textract for the scans), 21 MB of text, one file per report.
3. **The tables**: CSV files in git, the source of truth. Rows name their page; where a report prints its own total, the extract is checked against it.
4. **The database**: the CSVs are loaded into one SQLite database (`lunenburg.db`), copied online to Cloudflare D1 and queried at `/api/query`.
5. **The search index**: a second database holding the text of every page with a word index (SQLite FTS5), 8,686 annual-report pages, searched at `/api/search`.

Everything printed in the annual reports is public, names included.

## Every table, by subject

The grouping is ours, made for reading. *Editions* counts the reports a table has rows from; a series marks the editions that do not print the item in a separate coverage table.

## Finding aids: tables about the reports themselves

These describe the documents rather than the town: what each page holds, which tables were catalogued, which pages were read and how.

| TABLE | WHAT IT HOLDS | ROWS |
|---|---|---|
| `annual_report_catalogue` | A catalogue of what EXISTS, not of what has been extracted. | 3,676 |
| `series_coverage` | Which annual report editions were checked for each year-by-year series, and whether the series is printed there. | 3,082 |
| `annual_report_survey` | A measurement of PAGES, not of figures: per page, the extraction mode, how many gutters and money tokens it holds, how many characters and rows. | 2,751 |
| `series_report_contents_pages` | The report's own contents page. The department index at the front or back of each edition (none in 1986): one row per department or section, the first printed page as… | 2,637 |
| `report_index` | The town's OWN contents page of each annual report: every department and body it lists, the PRINTED page range of its report and the PDF pages that range lands on, or… | 702 |
| `report_anomalies` | Things found while reading the annual reports that need a person: a total that does not tie, a heading that moved, a column that vanished. | 521 |
| `series_scan_debris` | Scan debris and empty tables. Real captions, names and figures on pages where the machine read a table out of rules, photograph lettering or empty cells (covers,… | 208 |
| `annual_report_contents` | What was actually READ: which tables, from which pages, how many figures, and whether the extract is checkable against a printed total. | 199 |
| `report_filing` | Per body, which years it filed an annual report, which years the contents page printed `No Report Submitted`, and which years it was not listed at all. | 109 |

## What is not in the tables

- **174 pages are closed as unreadable or printed short**, each registered with its reason in `sources/data/page-blocked.csv`. Their words, where legible, are still in search.
- **Running prose is searchable but not tabulated.** Department narratives, by-law wording and letters are in the search index and the page text, not in table rows.
- **Some lists are one row per printed entry** (personnel changes, by-law articles), not split into columns.
- **"Not printed" in a series' coverage** rests partly on text searches rather than opened pages; each coverage row says which pages were looked at.
