

FY27 CAPITAL PLAN

Article 13

What is a Capital Project

Any **tangible** item,
That costs **\$20,000 or more**,
and has a useful life of **3 years or longer**.

OR

Groups of items of the same purpose that cost **at least \$20,000**

FY27 Capital Planning Process

Capital Planning Committee Members

- Peter Beardmore, Chair (School Committee Representative)
- Matthew Brenner(Planning Board Representative)
- Chris Menard(Finance Committee Representative)
- Caesar Nuzzolo (Select Board Representative)
- Robert Bowen, Resident at Large (Appointed by Town Moderator)

FY27 Capital Planning Process

Capital Planning Meetings

September 3, 2025: Initial Meeting

October 29, 2025: Presentations by Police and Schools

November 5, 2025: Presentations by Fire and DPW

November 19, 2025: Presentation by Facilities

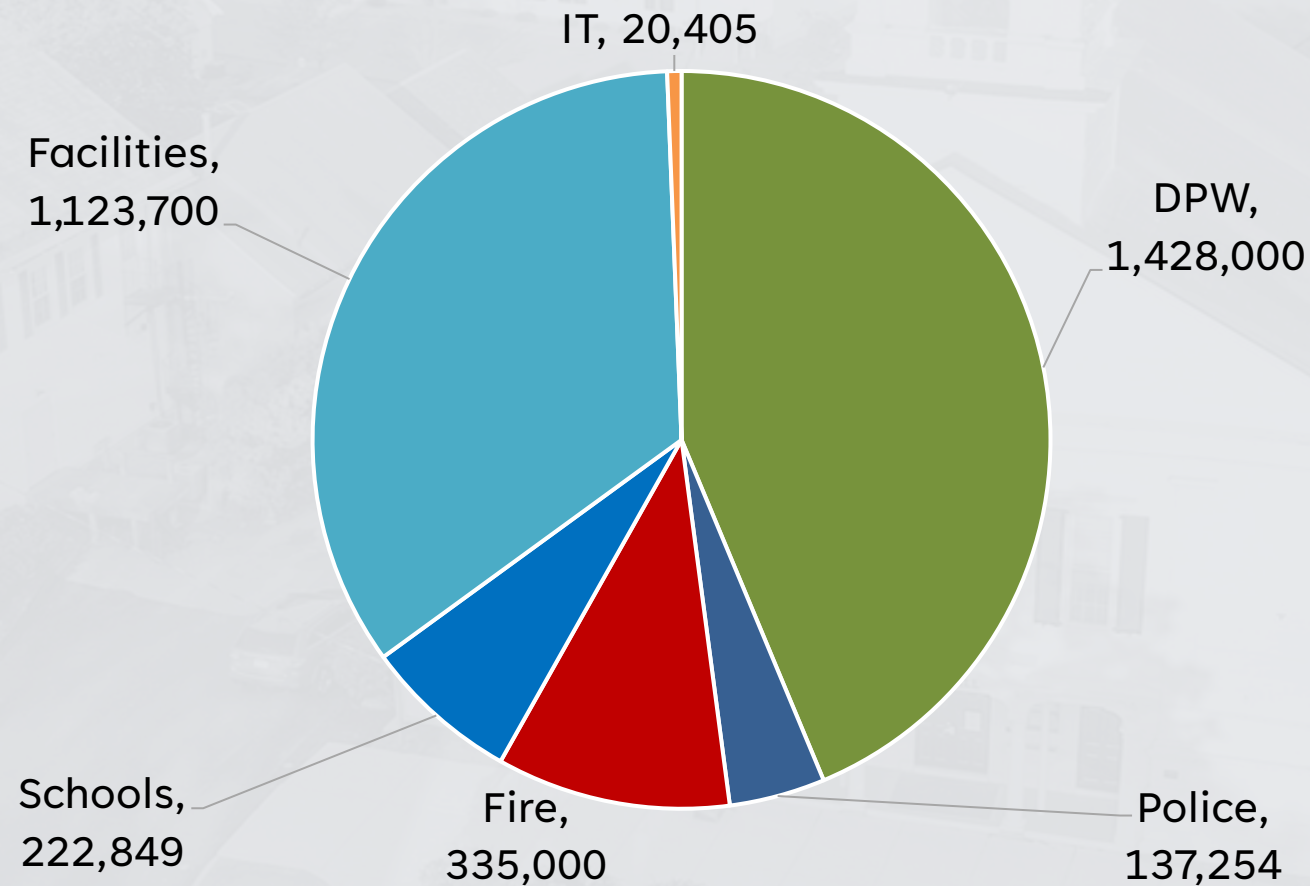

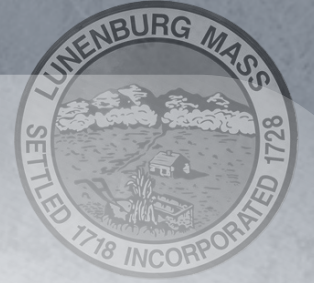

December 3, 2025: Presentation by Schools

December 10, 2025: Presentation by IT

December 17, 2025: Discussion and Vote on Rankings

FY27 Submitted Projects

Capital Planning Committee considered **22 projects** for FY27 which totaled **\$3,267,208**

CPC Rankings

CPC Rank	Dept.	Capital Project	Cost	Cumulative Cost
1	DPW	Flat Hill Rd Bridge Completion (Engineering and Construction)	350,000	350,000
2	Police	Patrol Cruiser (replacement)	68,627	418,627
3	Fire	Engine 2 - 4x4 Brush Truck (replacement)	335,000	753,627
4	Schools	Primary School Entry and Driveway Expansion (Design)	25,000	778,627
5	Schools	Primary School Playground (Design)	30,000	808,627
6	Police	Supervisor Cruiser (replacement)	68,627	877,254
7	Facilities	Public Safety Building Roof Repair	494,500	1,371,754
8	Facilities	Public Safety Building Boiler Upgrades	115,000	1,486,754

FY2027 Capital Program Funding

Source	Amount	Notes
Free Cash	\$991,627	
Raise and Appropriate	\$244,576	Equal to FY26, but less than average
Unexpended Prior Year Capital		None
Special Purpose Stabilization Fund	\$594,000	

Special Purpose Stabilization Fund

Adopted at the May 6, 2017 Annual Town Meeting, Article 10

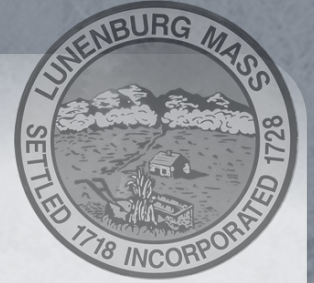

Purpose: Funding Future Capital Needs for Vehicles and Equipment

To date, there have been no transfers from the Special Purpose Stabilization Fund

Requires **2/3** Vote at Town Meeting

Current Balance: **\$2,641,397.10**

Special Purpose Stabilization Fund

Potential Future Uses of Vehicle Stabilization Fund.

Current Balance: \$2,641,397

Balance after motion: **\$2,047,397**

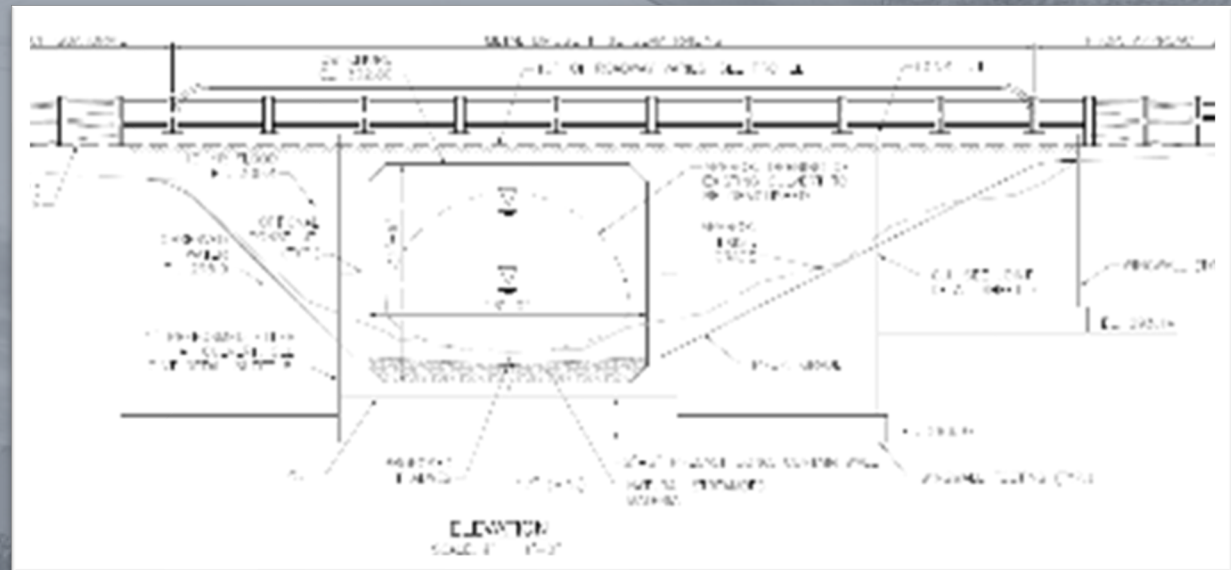

Several large purchases contemplated in the near-future.

	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036
Fire- Replace Engine 2	\$335,000.00									
Fire- Rescue 2 Replacement		\$615,850.00								
Fire- Squad 3 Replacement			\$1,443,000.00							
Fire- Replace 2019 Ambulance						\$837,908.00				
Fire- Engine 5 Replacement							\$996,785.00			
Fire- Replace Engine 1									\$1,418,794.00	
Fire- Replace 2025 Ambulance										\$1,139,957.00
DPW- Front End Loader with Snow Plow	\$259,000.00									
DPW- 6 Wheel Dump/Spreader/Plow	\$401,000.00									
DPW 6 Wheel Dump/Spreader/Plow					\$410,000.00					
DPW Road Sweeper						\$315,000.00				
DPW 6 Wheel Dump/Spreader/Plow Truck						\$415,000.00				
Totals	\$995,000.00	\$615,850.00	\$1,443,000.00	\$0.00	\$410,000.00	\$1,567,908.00	\$996,785.00	\$0.00	\$1,418,794.00	\$1,139,957.00
Cumulative Total		\$1,610,850.00	\$3,053,850.00	\$3,053,850.00	\$3,463,850.00	\$5,031,758.00	\$6,028,543.00	\$6,028,543.00	\$7,447,337.00	\$8,587,294.00

Flat Hill Road Bridge - \$350,000

Capital funds are required to completely fund the replacement of the Flat Hill Road over Catacoonamug Brook.

In April 2024, the Town awarded a construction contract to Kenefick Corporation for the replacement of the bridge. The contract specified a Completion Date of May 31, 2025. Unfortunately, Kenefick Corporation failed to perform any of the required work within the agreed timeframe. The Town was unable to reach a satisfactory resolution with Kenefick

Flat Hill Road Bridge – \$350,000

The Town has since re-advertised the project and an IFB is pending.

Based upon the prior bid opening, it is anticipated that \$1,200,000 will be need for construction and \$50,000 for engineering.

The project is presently funded through a \$600,000 MassDOT Small Bridge Grant and \$300,000 FY22 Capital appropriation for a total of \$900,000.

These funds will bridge that gap for a total project cost estimated at \$1,250,000.

Police Cruiser – \$68,627

A new Explorer Interceptor/GAS vehicle to replace the 2019 Chevrolet Tahoe. With 78,320 in mileage. This Tahoe is the last of the Tahoe's and has reached its end of life.

Why not a hybrid? This vehicle is a gas powered vehicle as opposed to a hybrid. Between July-September 2025 the Department experienced three hybrid failures. The failures were related to the batteries which require an expensive (\$20K repair) if not under warranty. The gas vehicles can also be repaired in-house.

The goal is to blend the fleet with a mix of gas and hybrid vehicles to extend the overall lifespan of the fleet.

Engine 2 - 4x4 Brush Truck - \$335,000*

Replacement of 37 year old chassis/15 year old body. 7 years past planned life expectancy; has been postponed more than once

Existing vehicle is increasingly mechanically unreliable and has limited firefighting capability. New unit would carry double the water (300 gallons), a larger pump and more space to safely store equipment. As the last couple years have shown, brush fire are becoming a major concern again.

Safer; Current unit has no modern safety features like airbags and antilock brakes; Less maintenance on new vehicle; More capability (Larger pump & water tank; More storage area for equipment and protective clothing

Primary School Entry and Driveway Design – \$25,000

Current parking capacity is not sufficient for school day and weekend event this study will provide solutions.

Currently emergency vehicles do not have sufficient access to the school should an event occur during arrival, dismissal or a whole school event.

Contracting a designer to review the feasibility of the following study areas:

- Massachusetts Avenue entry expansion options
- Current parking capacity during the school day/weekend events
- Expansion of the driveway and driveway parking to the school facility
- Evaluate emergency access Police, Fire and EMT vehicles with various capacity levels
- Review any environmental limitations related to wetlands

Primary School Playground Design – \$30,000

The current playground is not age appropriate and is not safe for all students. Additionally, the current play structure also is not ADA compliant.

Funds will allow a consulting/design firm to work with stakeholders in developing a new age-appropriate, inclusive and accessible playground for the students of the Lunenburg Primary School.

This is the first step in a multi-year process.

Police Cruiser – \$68,627

A new Explorer Interceptor/GAS vehicle to replace the 2019 Chevrolet Tahoe. With 78,320 in mileage. This Tahoe is the last of the Tahoe's and has reached its end of life.

Why not a hybrid? This vehicle is a gas powered vehicle as opposed to a hybrid. Between July-September 2025 the Department experienced three hybrid failures. The failures were related to the batteries which require an expensive (\$20K repair) if not under warranty. The gas vehicles can also be repaired in-house.

The goal is to blend the fleet with a mix of gas and hybrid vehicles to extend the overall lifespan of the fleet.

Public Safety Roof Repair – \$494,500

This request is for funding to replace the roof of the public safety building in its entirety. The roof is original to the building and over 20 years old.

There have been several leaks on the asphalt shingle section and the shingles are showing signs of serious deterioration. The rubber roofing over the fire garage is also showing its age and is in the early stages of roof failure.

This project would remove all existing roofing and replace the shingled areas with new 25 year architectural shingles with 100% ice and water shield coverage. The rubber roof over the garage will be replaced with a white TPO roof which will help keep the building cooler in the summer months.

Public Safety Boiler Upgrades – \$115,000

This project is for replacement / upgrades to the 2 current oil-fired boilers and pumps. Current system is 20 years old and original to the building.

The current system has experienced constant maintenance issues and affect staff that work in the building 24/7.

Working heat and hot water is essential to this building as the state requires prisoners to have heat and hot water as well as the Fire/EMS side needing hot water for decontamination purposes.

School Door Security Intercoms Turkey Hill & Primary - \$29,044

With the present system, the school secretary cannot see the person that they are buzzing into the building. This poses a safety hazard.

This will be rectified with the upgraded system.

Public Safety Building Controls - \$35,000

Replacement of the head-end control system for building's HVAC controls, boilers, chiller, unit heaters and air handlers.

The current building controls system is original to the building - 20 years old. The current system has constant maintenance issues, parts are hard to find and the current system uses proprietary parts.

Upgrading the controls will improve energy efficiency in the building while also improving employee comfort and reducing service calls.

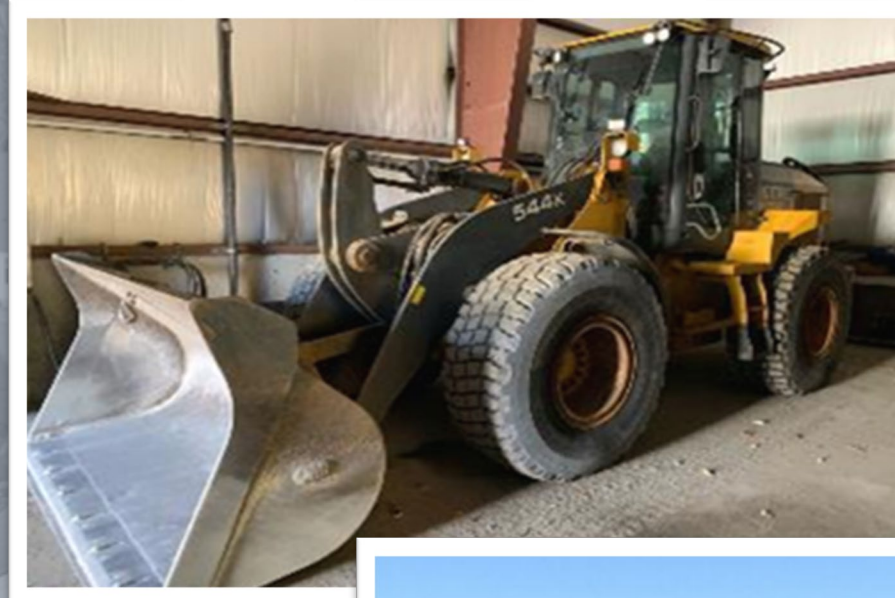

Front End Loader with Snow Plow – \$259,000*

This would replace the current back up loader which is quickly approaching the point of not being cost effective to make the necessary repairs to be safe and reliable. In FY 2027 this loader will be 16 years old or 1 year past its planned life of 15 years. Ideally, the DPW should have two large loaders.

A second loader was rented for 2.4 months last winter as this is the most critical time to have 2 loaders. The rental cost was \$6,712/month.

If a loader is rented for the 15 year life span of a loader the cost would be \$402,720 or \$123,720 more than the cost of a new loader.

**Funded from Vehicle Use Special Purpose Stabilization Fund*

Adult Activity Center Network Upgrade - \$20,405

The Adult Activity Center requires a network modernization to replace unstandardized, end-of-life (EOL) hardware that currently poses an operational risk. The current network infrastructure consists of ad-hoc equipment that is inconsistent with Town standards. This hardware has reached 'end-of-life' status, leaving it ineligible for critical security patches and updates. Upgrading this infrastructure will ensure compatibility with the rest of the Town's network while significantly strengthening the building's security posture

Replacing EOL hardware ensures the building receives critical security patches, protecting the Town's network from modern cyber threats. Upgrading to a single, town-wide platform standardizes management and ensures seamless connectivity across all municipal locations.
